

Wayne O Evans

I am a 77 year-old (young) retired IBM employee with excellent computer skills, team leadership, project management and communication skills. These skills plus my web design experience and implementation are skills your organization can use.

My background, work history, and resume can be downloaded from <http://waynes-web-design.com/>

Let me answer the question you must have.

“Why does a 77 year old seek employment?”

Simple I enjoy work, intellectual stimulation of colleagues, and new challenges. A good job allows me to use my skills and provides the services you need.

I want to help an organization that improves life for youth and disadvantages through education.

I seek a job that can be done from my home. Few meetings and independent work that can be done at early hours of day is my preference. I can be available for during normal business hours (8-5) but not on a regular basis.

I do not want a full time job as I like retirement life but want the intellectual stimulation and new challenges.

My greatest asset: I am a good communicator.
I am willing to learn and work hard.
