RECOMMEND

Editor: WordPress

Web Host BlueHost.com

You can be an effective front end developer in 2 weeks of work.. The modern website editors are a WYSIWIG (What You See Is What You Get) visual editor. NO PROGRAMMING required.

There are multiple editors you can use. I recommend **WordPress** as it free and the most popular with over 28% of websites.

It is easy to get started in Web Design.

The best way to learn is DO IT.

You likely learned to drive a car not by reading about driving but by actual hands-on driving in a controlled environment.

I recommend you start by creating your personal/professional website. The website hosting will cost about \$200 for a three year contract. There are many good web host companies in all price ranges. I recommend **Blue Host** which has a one click install.

A promotional banner for Bluehost web hosting. The background is a dark blue gradient. At the top center is the Bluehost logo, which consists of a 3x3 grid of blue squares followed by the word "bluehost" in a white, lowercase, sans-serif font. Below the logo, the text "The Best Web Hosting" is written in a large, white, sans-serif font. Underneath this, there is a list of four bullet points in white text: "• FREE Domain Name Registration", "• FREE SSL Certificate Included", "• 1-Click WordPress Install", and "• 24/7 Support". Below the list, the pricing is shown as "Starting at ~~\$7.99~~ \$2.95/month*". At the bottom of the banner is a bright green rectangular button with the text "Get Started" in white. Below the button, there is a line of small white text: "* Special intro offer and 30-day money-back guarantee".

** Special intro offer and 30-day money-back guarantee*

You will want to create your logo. Search free clip art and choose a image you like and edit (personalize) the image with your text.

One of the skills you must learn is the ability to modify images. Again I recommend a FREE image editor rather than Photo Shop. I installed the LINUX operating system rather than Windows because included in the LINUX install are two complete image editing packages. The good news LINUX is FREE and more secure than Windows. Also included is a full office suit, Open Office.

I am convinced LINUX is faster than Windows.

Get Started

When your website is complete, now you have something to show friends/prospective employers. You can refine your skills in classes but now you have some experience.

I wish you good fortune in a new career.

If I can help in the future, I am just an e-mail away
